RE: Web Developer

Dear Hiring Manager

Before I learned with a SAIT diploma in software development I graduated from Sai Gon Technology University and worked in a position as a Web developer for some companies in my country. I was able to contribute to growing this department by creating website and management content. My framework is used to create a website as WordPress, and the database is MySQL. I updated the UI to the requirements of the company. Behind, I wrote the content as standard from Google Search and followed the SEO plan to optimize and get top on Google Search. Especially, I especially got the top for the keyword "vach ngan di dong" and get the top nowadays. The organic traffic is easy to make conversion to increase revenue online of the company.

Behind this, I have the ability to write clear code for a scalable system through experience with personal projects. Behind, I usually learn new skills, data security, and industry trends on LinkedIn. In addition, I also worked efficiently both independently and in collaboration development team from communication and understanding clearly analyzing the project before implementation. Finally, I'm patient in finding the problem and solving it in both academic and personal projects.

Thank you for reviewing my application. Please do not hesitate to contact me at 825-288-0437 if you would like to further discuss my qualifications for **Web Developer** the opportunity.

Best regards,

John
